Art Unit: 2174

DETAILED ACTION

- 1. This communication is responsive to an amendment filed 5/1/07.
- 2. Claims 1-22 are pending in this application; and, claims 1, 9, 12 and 15 are independent claims. This action is made Final.
- 3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 103

4. Claims 1-5, 7-10, 12-19, 21 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Piwonka et al. ("Piwonka") in view of *Teach Yourself Web Publishing* with HTML 4 in a Week ("HTML").

As per claim 1, although Piwonka teaches a method of providing a BIOS generated display of strings in a computer comprising providing a set of strings to be displayed by the BIOS (figs. 2-4; col. 6, lines 48-65; col. 26, lines 9-28); moreover, providing a first string of the set to be displayed in a first format and wherein when displaying the first string of the set, encountering by a display engine of the BIOS to generate the display of the first string with the portion of the first string displayed in the first format (figs. 2-4; col. 6, lines 48-65; col. 26, lines 9-28), Piwonka does not explicitly disclose providing a first escape code within a first string of the set wherein the first escape code provides an indication of at least a portion of the first string that is to be displayed in a first format so that upon encountering and interpreting the first escape

Art Unit: 2174

code by a display engine, the first format is determined and the first string with the portion of the first string in the first format is generated for display. HTML teaches providing a tag/first escape code within a first string of the set wherein the first escape code provides an indication of at least a portion of the first string that is to be displayed in a first format so that upon encountering and interpreting the first escape code by a display engine, the first format is determined and the first string with the portion of the first string in the first format is generated for display (pages 123-125, 207-208 and 564-566; e.g. tag/escape code or <U> provides an indication that at least a portion of a first string is to be displayed in a first format such as "September 26, 1996" or "Sign Here"). It would have been obvious to an artisan at the time of the invention to incorporate the method of HTML with the method of Piwonka in order to change the appearance of text or string so it is somehow different from the surrounding strings.

As per claim 2, the modified Piwonka teaches a method of providing a BIOS generated display of strings in a computer comprising providing a cancel escape code within the first string and wherein the portion of the first string between the first escape code and the cancel escape code is displayed in the first format (Piwonka: figs. 2-4; col. 6, lines 48-65; col. 26, lines 9-28; HTML: pages 123-125 and 564; e.g. *cancel tags/cancel escape codes "/" or "/<U>")*.

As per claim 3, the modified Piwonka teaches a method of providing a BIOS generated display of strings in a computer comprising providing a second escape code within the first string of the set wherein the second escape code provides an indication of at least a portion of the first string that is to be displayed in a second format and

Art Unit: 2174

wherein the portion of the first string between the first escape code and the second escape code is displayed in the first format and wherein the portion of the first string after the second escape code is displayed in the second format (Piwonka: figs. 2-4; col. 6, lines 48-65; col. 26, lines 9-28; HTML: pages 123-125; disclosed are a plurality of tags/escape codes used such as ,r <U>, <I>, etc. and a plurality of formats displayed such as "September 26, 1996", "Sign Here", "Inferno", etc.).

As per claim 4, the modified Piwonka teaches a method of providing a BIOS generated display of strings in a computer comprising providing a third escape code within a second string of the set, wherein the third escape code provides an indication of at least a portion of the second string that is to be displayed in a third format (Piwonka: figs. 2-4; col. 6, lines 48-65; col. 26, lines 9-28; HTML: pages 123-125; *disclosed are a plurality of tags/escape* codes used such as *,r <U>, <I>, etc.* and a plurality of formats displayed such as "September 26, 1996", "Sign Here", "Inferno", etc.).

As per claim 5, the modified Piwonka teaches a method of providing a BIOS generated display of strings in a computer wherein the first format is a bold typeface (Piwonka: figs. 2-4; col. 6, lines 48-65; col. 26, lines 9-28; HTML: pages 123-125 and 564).

As per claim 7, the modified Piwonka teaches a method of providing a BIOS generated display of strings in a computer wherein the first format is an underlined typeface, the method further comprising displaying the portion of the first string in the

Art Unit: 2174

underlined typeface by controlling each bottom row pixel of each character of the portion (Piwonka: figs. 2-4; col. 6, lines 48-65; col. 26, lines 9-28; HTML: pages 123-125 and 566).

As per claim 8, the modified Piwonka teaches a method of providing a BIOS generated display of strings in a computer wherein the first format is a first text color and a first background color (HTML: pages 207-208).

Claims 9 and 10 in combination is similar in scope to claim 5 and is therefore rejected under similar rationale.

Claims 12, 13 and 14 in combination is similar in scope to claim 7 and is therefore rejected under similar rationale.

Claim 15 is similar in scope to claim 1 and is therefore rejected under similar rationale.

Claim 16 is similar in scope to claim 2 and is therefore rejected under similar rationale.

Claim 17 is similar in scope to claim 3 and is therefore rejected under similar rationale.

Claim 18 is similar in scope to claim 4 and is therefore rejected under similar rationale.

Claim 19 is similar in scope to claim 5 and is therefore rejected under similar rationale.

Claim 21 is similar in scope to claim 7 and is therefore rejected under similar rationale.

Art Unit: 2174

Claim 22 is similar in scope to claim 8 and is therefore rejected under similar rationale.

5. Claims 6, 11 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Piwonka et al. ("Piwonka") in view of *Teach Yourself Web Publishing with HTML 4* in a Week ("HTML") as applied to claims 5, 10 and 19 respectively, and further in view of Hays et al. ("Hays").

As per claim 6, although the modified Piwonka teaches a method of providing a BIOS generated display of strings in a computer comprising displaying the portion of the first string in the bold typeface (HTML: pages 123-125 and 564; e.g. *tag/escape code* <8> provides an indication that at least a portion of a first string is to be displayed in a first format such as "September 26, 1996"), Piwonka does not explicitly disclose the portion of the first string in the bold typeface is displayed by shifting a copy of each character pixel row data by one pixel position and performing a logical OR on each character row data with the shifted copy to control pixels that produce the display of each character of the portion. Hays teaches a portion of the first string in the bold typeface is displayed by shifting a copy of each character pixel equivalent row data by one pixel equivalent position and performing a logical OR on each character row data with the shifted copy to control pixels, or equivalence thereof, that produce the display of each character of the portion (col. 1, lines 9-16). It would have been obvious to an artisan at the time of the invention to incorporate the method of HTML with the method of the modified Piwonka in order to provide users with an implementation preference.

Art Unit: 2174

Claims 11 and 20 are individually similar in scope to claim 6 and are therefore rejected under similar rationale.

Response to Arguments

6. Applicant's arguments filed 5/1/07 have been fully considered but they are not persuasive.

Applicant argued the following:

- (a) Piwonka does not teach or suggest that the BIOS includes a display engine for encountering and interpreting the first escape code, and HTML does not discuss a BIOS. Furthermore, although Piwonka teaches that strings will be presented in a particular format by the BIOS, Piwonka does not teach or suggest that a string is presented in a modified format that can be easily changed.
- (b) Only with hindsight gleaned from applicant's disclosure can one come to the conclusion that HTML can be combined with the BIOS teachings of Piwonka, moreover, HTML is non-analogous art.
- (c) Piwonka does not discuss underlining, and HTML discloses the formatting tag <u> for underlining text without disclosing how the underlining is achieved.

The Office disagrees for the following reasons:

Per (a) and in response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231

Art Unit: 2174

USPQ 375 (Fed. Cir. 1986). Piwonka teaches providing a set of strings to be displayed by the BIOS in a first format (figs. 2-4; col. 6, lines 48-65; col. 26, lines 9-28). The teaching extracted from HTML was for the feature of encountering and interpreting the first escape code (pages 123-125, 207-208 and 564-566).

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., that a string is presented in a modified format, one that can be easily changed) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

Per (b) and in response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See *In re McLaughlin*, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971).

Furthermore, in response to applicant's argument that HTML is nonanalogous art, it has been held that a prior art reference must either be in the field of applicant's endeavor or, if not, then be reasonably pertinent to the particular problem with which the applicant was concerned, in order to be relied upon as a basis for rejection of the

Art Unit: 2174

claimed invention. See *In re Oetiker*, 977 F.2d 1443, 24 USPQ2d 1443 (Fed. Cir. 1992). In this case, HTML is in the field of applicant's endeavor and is pertinent to the particular problem with which the applicant was concerned, i.e. formatting text.

Per (c), as depicted on pages 123-125 of HTML, "<u>Sign Here</u>" shows how a first character and subsequent characters are rendered as a result of using the <u> tag for underlining, i.e. a bottom row pixel of a character is manipulated/controlled so that a line is drawn on the bottom line of the character such as "<u>S</u>".

Conclusion

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
